RICCO SF 770

Characteristics	Sulphonated / Sulphitated
Composition	Vegetable, animal and synthetic Oils
Appearance	Fluid
Colour	Light brown
Charge	Anionic
pH (sol. 1-10)	6,5-7
Tanning bath stability	Good
Light fastness	Good
Active substance	55 ± 2%

PROPERTIES:

RICCO SF 770 is used as a universal fatliquor for its stability to acids, electrolytes and chromium and aluminium basic salts.

During pickling and chrome tannage it allows improved dispersion of natural fat, increases the fixation of chromium and aluminium salts and contributes to intensify the tear strength of the fibres.

In vegetable and chrome retanning, apart from being an excellent fibre lubricant it also improves dispersion of the vegetable extracts.

RICCO SF 770 used as a fatliquor alone or in a mixture with other oils confers the leathers with remarkable fullness and a pleasant touch.
